'Construction Technology' provides a comprehensive introduction to every aspect of the technology of domestic low-rise construction and principal

associated legislation.

The authors provide a comprehensive and practical presentation to many aspects of construction practice, as applied to buildings for industrial and commercial purposes. The book covers site works, plant and equipment, substructure, demolition and temporary work, and much more.

Rev. ed. of Basic construction materials / Theodore W. Marotta. 2005

This book is an in-depth introduction covering some of the basic materials used in construction. Thorough coverage of industry standards provides preparation for further study in construction methods, specification writing, design methods, and so forth. Contains coverage of the most widely used construction materials, such as aggregates, asphalt, asphalt concrete, portland cement concrete, masonry, iron, steel, and wood.

This 5th edition covers the latest practices and processes of various alternative methods for the construction of tall buildings from foundation to roof. The text progresses through the stages of site investigation, excavation and earthmoving, foundation construction, basement construction, structural systems for the superstructure, site and material handling, wall and floor construction, external wall and roof construction. The planning, safety and environmental considerations, methods, materials, equipment, and construction sequence of the various proprietary systems for each of these respectively stages are discussed. The target readers are practitioners and students in building and construction professions including architecture, engineering, project and facilities management, building and construction management, real estate, quantity and land surveying.

This book introduces the latest construction practices and processes for tall buildings from foundation to roof. It attempts to acquaint readers with the methods, materials, equipment and systems used for the construction of tall buildings. The text progresses through the stages of site investigation, excavation and foundations, basement construction, structural systems for the superstructure, site and material handling, wall and floor construction, cladding and roof construction. The construction sequence, merits and limitations of the various proprietary systems commonly used in these respective stages are discussed. This fourth edition also includes several new topics not covered in the previous edition. The target readers are practitioners and students in the related professions including architecture, engineering, building, real estate, construction, project and facilities management, and quantity and land surveying.

Construction Technology provides a comprehensive introduction to every aspect of the technology of domestic low-rise construction. It includes elements of commercial construction, and the principal associated legislation. Based on "Construction Technology Volumes 1 and 2", this combined new edition has been updated in line with contemporary legislation and practice. In addition a substantial amount of new material has been included, in order to cover recent developments in technology affecting the construction industry. This book covers the basic elements of substructure (site works, setting.

This best-selling resource is a great refresher and hands-on resource for counselors new to their professions. It's packed with step-by-step guidance for developing the skills and techniques they need to effectively help their clients. It covers not just the basic building blocks in the profession, but also what the author calls the megaskills and common curative factors that lie behind the methods. The tone is conversational and the references are very useful.

This is the eBook of the printed book and may not include any media, website access codes, or print supplements that may come packaged with the bound book. Now significantly expanded and fully updated, INFORMATION TECHNOLOGY FOR THE HEALTH PROFESSIONS, 4/e is the ideal information technology primer for readers working in any healthcare field, including allied health, nursing, medical/dental/pharmaceutical assisting, or medical administration. It fully addresses each key issue in contemporary healthcare IT, including the accelerating migration towards electronic health records. New coverage includes: smartphones, tablets, and their healthcare applications; the role of healthcare reform in promoting health IT; EHR meaningful use criteria; new practice management scheduling software; the growth of telemedicine; new problems in public health; interventional radiology; surgery-related nanotechnology; information-related biotech and pharmaceutical trends; expanded applications in psychiatry and rehabilitation; genetic privacy; and much more.

Sustainable Construction Technologies: Life-Cycle Assessment provides practitioners with a tool to help them select technologies that are financially advantageous even though they have a higher initial cost. Chapters provide an overview of LCA and how it can be used in conjunction with other indicators to manage construction. Topics covered include indoor environment quality, energy efficiency, transport, water reuse, materials, land use and ecology, and more. The book presents a valuable tool for construction professionals and researchers that want to apply sustainable construction techniques to their projects. Practitioners will find the international case studies and discussions of worldwide regulation and standards particularly
