~~Understanding Depth of Field - A Beginner's Guide~~

Depth of field (DOF) or focus range is the distance between the closest and farthest objects in an image both of which are in focus. All objects between these closest and farthest objects are also in focus. Depth of Field is controlled by three factors, each shown with example photos below. Click & Jump to each or scroll down to view them all:

~~Aperture & Depth of Field Photography Guide [2020] - Dave ...~~

Depth of field (DoF) is the distance between the nearest and furthest elements in a scene that appear to be "acceptably sharp" in an image. Why should I care? Mastering depth of field will give you the creative control over what's in sharp focus in your images, turning you into a better storyteller. Recommend me a few Masters to inspire me

~~Depth of Field: The Definitive Photography Guide | PhotoPills~~

Depth of field is affected by three key factors. First, the aperture of the lens, with narrower apertures resulting in deeper depth of field, and wider apertures providing shallower depth of field.

~~Depth of Field Explained: The Ultimate Guide to Depth of Field~~

Depth of Field - A General Guide for Beginners Depth of field is one of the most powerful tools we photographers have in our arsenal. It can be used to create great depth in a landscape or highlight the eyes of a model. In this short guide we will take a look what depth of field is and some of it's uses.

~~Depth of Field - A General Guide for Beginners | Light ...~~

The depth of field in an image is the distance between the parts that appear in focus. When there's a big distance between the things that look crisp and sharp, it's known as a wide or deep depth...

~~Depth of field: What do I need to know? - Academy Guides~~

A basic definition of depth of field is: the zone of acceptable sharpness within a photo that will appear in focus. In every picture there is a certain area of your image in front of, and behind the subject that will appear in focus. This zone will vary from photo to photo.

~~Depth of Field Table~~

Depth of field (DOF): The distance between the farthest and nearest points which are in acceptable focus. This can also be identified as the zone of acceptable sharpness in front of and behind the subject to which the lens is focused on.

~~Depth of Field (DoF) calculator | PhotoPills~~

As noted earlier, depth of field simply refers to the area of an image that's in focus. A shallow depth of field indicates that a smaller area of the shot is in focus, as seen in the portrait above. The benefit of a shallow depth of field is that with the background blurred out, our eyes retain focus on the primary subject.

~~A Beginner's Guide to Aperture and Depth of Field~~

Depth-of-field (DOF) is more than a button on the front of a camera; it is a complex mathematical system that interweaves focal length, focusing distance and aperture. Many modern SLR/DSLR lenses no longer have complete or accurate DOF markings.

Depth of field (DOF) is the term used to describe the size of the area in your image where objects appear acceptably sharp. The area in question is known as the field, and the size (in z-space) of that area is the depth of that field. DOF is governed by the angle at which light rays enter the lens.

~~Depth Of Field Guide - partsstop.com~~

At a focal length of 50mm the total depth of field (distance that would be an acceptable level of sharpness) will be 2.71m. Compare this to using a 100mm focal length and now your total depth of field will be 0.63m. Even though you are the same distance away and using the same aperture, your depth of field is shallower due to your focal length.?
