In The Essence of Software Engineering, Ivar Jacobson and his coauthors have tackled the ambitious task of distilling out those essential elements, the “kernel,” that lie at the heart of all software engineering methods and practices. This work holds out the promise of giving those of us engaged in teaching software engineering a “theory” upon which to build a coherent and successful curriculum.

Creating a simple language to describe methods and practices, the SEMAT team expresses this common ground as a kernel—or framework—of elements essential to all software development. The Essence of Software Engineering introduces this kernel and shows how to apply it when developing software and improving a team’s way of working. It is a book for software professionals, not methodologists.

Work on the kernel, the essence of software engineering, was inspired by and is a direct response to the Software Engineering Methods and Theory (SE-MAT) call for action (see Figure 1). It is, in its own way, one small step toward redefining software engineering. SEMAT was founded in September 2009 by Ivar Jacobson, Bertrand Meyer,

"No Silver Bullet – Essence and Accident in Software Engineering" is a widely discussed paper on software engineering written by Turing Award winner Fred Brooks in 1986. Brooks argues that "there is no single development, in either technology or management technique, which by itself promises even one order of magnitude improvement within a decade in productivity, in reliability, in simplicity." He also states that "we cannot expect ever to see two-fold gains every two years" in software ...
