"The question posed to conduct this research was: How do teachers incorporate real world problems into geometry classrooms? There is no single answer to this question, but there are many answers. The research done in this literature review not only answers this question but also the question of why. The research reviewed was organized into the sections of Inquiry, Student Engagement, and Mathematical Understanding. Teachers can incorporate the real world into mathematics classrooms through inquiry, problem-based learning, and every day real world objects. Teachers should do this because it increases student engagement and leads students to higher mathematical understandings. Not only does incorporating the real world into the classroom do all of these things for students, it does so much more. It can allow students to see mathematical connections to themselves, their interests, and the world around

them. It can allow students to grow in skills such as communication with others, investigation, mathematical modeling, and the love of learning. There is not doubt that incorporating real world problems into any mathematical classroom will increase students' engagement and understanding. It is time to use inquiry based teaching methods in addition to traditional methods for the benefit of the future generations"--Provided by author.

"Where are we ever going to use this?" Every high school math student has asked this question. Often teachers themselves aren't sure how to respond. One answer is that higher mathematics learned in high school will be essential to learning yet more at the college level. A more satisfactory answer calls for an awareness of how math is applied in many specific areas. Written primarily for teachers, this book presents hundreds of practical applications for mathematics--from baseball statistics to the theory of relativity--that
