Someone is making a great big mess at the zoo in this hilarious and delightful debut picture book. Can you find the culprit before the zoo animals' do in this gentle mystery for the youngest readers? All the animals at the zoo are in a tizzy. Someone slept in Elephant's haystack, drank from Lion's bowl, went potty in Ostrich's sandbox (yuck!), and scratched Giraffe's favorite tree. Worst of all, someone tried to eat Goldie, the zoo's resident goldfish. Whoever it was has been leaving a suspicious trail of footprints behind. Is it a great big scary monster as the animals fear? Or is it something else entirely? Follow the clues on every page, and you just might be surprised to see who is behind this very messy situation.

The study of dinosaurs has been experiencing a remarkable renaissance over the past few decades. Scientific understanding of dinosaur anatomy, biology, and evolution has advanced to such a degree that paleontologists often know more about 100-million-year-old dinosaurs than many species of living organisms. This book provides a contemporary review of dinosaur science intended for students, researchers, and dinosaur enthusiasts. It reviews the latest knowledge on dinosaur anatomy and phylogeny, how dinosaurs functioned as living animals, and the grand narrative of dinosaur evolution across the Mesozoic. A particular focus is on the fossil evidence and explicit methods that allow paleontologists to study dinosaurs in rigorous detail. Scientific knowledge of dinosaur biology and evolution is shifting fast, and this book aims to summarize current understanding of dinosaur science in a technical, but accessible, style, supplemented with vivid photographs and illustrations. The Topics in Paleobiology Series is published in collaboration with the Palaeontological Association, and is edited by Professor Mike Benton, University of Bristol. Books in the series provide a summary of the current state of knowledge, a trusted route into the primary literature, and will act as pointers for future directions for research. As well as volumes on individual groups, the series will also deal with topics that have a cross-cutting relevance, such as the evolution of significant ecosystems, particular key times and events in the history of life, climate change, and the application of a new techniques such as molecular palaeontology. The books are written by leading international experts and will be pitched at a level suitable for advanced undergraduates, postgraduates, and researchers in both the paleontological and biological sciences.
