In this provocative analysis of the central issues and developments in modern social theory, Dr Strasser contends that enquiry into the function, tasks and mission of sociology as a discipline can be understood only in relation to the subject's historical development. He believes that a discussion of the origin and intention of sociology, particularly in relation to the established social order, enables us to grasp fully the nature of sociological theory, both past and present. He maintains that a sociologist's own position in society, and consequently his views on its development and his way of expressing those views, will affect the theoretical position he takes up.

This comprehensive collection of classical sociological theory is a definitive guide to the roots of sociology from its undisciplined beginnings to its current influence on contemporary sociological debate. Explores influential works of Marx, Durkheim, Weber, Mead, Simmel, Freud, Du Bois, Adorno, Marcuse, Parsons, and Merton Editorial introductions lend historical and intellectual perspective to the substantial readings Includes a new section with new readings on the immediate "pre-history" of sociological theory, including the Enlightenment and de Tocqueville Individual reading selections are updated throughout
