From New York Times bestselling author Sam Kean comes incredible stories of science, history, finance, mythology, the arts, medicine, and more, as told by the Periodic Table. Why did Gandhi hate iodine (I, 53)? How did radium (Ra, 88) nearly ruin Marie Curie's reputation? And why is gallium (Ga, 31) the go-to element for laboratory pranksters? \*The Periodic Table is a crowning scientific achievement, but it's also a treasure trove of adventure, betrayal, and obsession. These fascinating tales follow every element on the table as they play out their parts in human history, and in the lives of the (frequently) mad scientists who discovered them. THE DISAPPEARING SPOON masterfully fuses science with the classic lore of invention, investigation, and discovery--from the Big Bang through the end of time. \*Though solid at room temperature, gallium is a moldable metal that melts at 84 degrees Fahrenheit. A classic science prank is to mold gallium spoons, serve them with tea, and watch guests recoil as their utensils disappear.

This Handbook presents both a theoretical and practical approach to conducting social science research on, for, and about women. It develops an understanding of feminist research by introducing a range of feminist epistemologies, methodologies, and emergent methods that have had a significant impact on feminist research practice and women's studies scholarship. Contributors to the Second Edition

continue to highlight the close link between feminist research and social change and transformation. The new edition expands the base of scholarship into new areas, with 12 entirely new chapters on topics such as the natural sciences, social work, the health sciences, and environmental studies. It extends discussion of the intersections of race, class, gender, and globalization, as well as transgender, transsexualism and the queering of gender identities. All 22 chapters retained from the first edition are updated with the most current scholarship, including a focus on the role that new technologies play in the feminist research process. Utopia comes at a cost. Daphne Patai knows this from experience as a university professor who began her career as an avant-garde feminist and then came to question the premises, the means, and the ends of her feminist colleagues in the academy. She was castigated, threatened with lawsuits, and excluded. In this collection of essays, Patai explores the bind in which many feminists find themselves when struggling to actualize their feminist utopia--inclusion entails the exclusion of men, expression results in the silence of critics, and power yields the disempowerment of dissenters. With a keen ear for irony and a deft ability to puncture pretense, Patai writes with verve about some of our feminist pieties and their consequences.

Consistent with previous editions of *An Introduction to Physical Science*, the goal of the new Thirteenth edition is to stimulate students' interest in and gain knowledge of the physical sciences. Presenting content in such a way that students develop the critical reasoning and problem-solving skills that are needed in an ever-changing technological world, the authors emphasize fundamental concepts as they progress through the five divisions of physical sciences: physics, chemistry, astronomy, meteorology, and geology. Ideal for a non-science majors course, topics are treated both descriptively and quantitatively, providing instructors the flexibility to emphasize an approach that works best for their students. One of Italy's leading men of letters, a chemist by profession, writes about incidents in his life in which one or another of the elements figured in such a way as to become a personal preoccupation

Leads the reader on a delightful and absorbing journey through the ages, on the trail of the elements of the Periodic Table as we know them today. He introduces the young reader to people like Von Helmholtz, Boyle, Stahl, Priestly, Cavendish, Lavoisier, and many others, all incredibly diverse in personality and approach, who have laid the groundwork for a search that is still unfolding to this day. The first part of Wiker's witty and solidly instructive presentation is most suitable to middle school age, while the later chapters are designed for ages 12-13 and up, with a final chapter somewhat more advanced. Illustrated by Jeanne Bendick and Ted Schluenderfritz.

The man who stole her heart Dana Bailey was a woman on the run, and romance was the last thing on her mind. But when her great escape led her to Detective Kurt Noble's arms, she was torn. Whitehorn's sexiest lawman could cost Dana her freedom if he ever found out her secret--and yet he'd already locked up her heart. Could she risk her future for the passion she felt only in his embrace?
