The first part is the main objective of the industrial piping codes.

To ensure the structural integrity of the piping systems, the piping codes have assembled a set of procedures and specifications covering the minimum requirements for material, design, fabrication, erection, inspection, and testing.

The stress is caused by
the pipe pushing against
some fixed restraint.

Thermal stresses are
“secondary stresses”
because they are self-
limiting. That is,

yielding or deformation of the part reduces the stress. Higher stresses are allowed than in the primary case because of this self limiting behavior.
