Software problem framing is a way to find specifications for software. Software problem frames can be

used to
structure the
environment of a
software system
(the machine)
and specify
desired software
properties in
such a way that
we can show that
software with
these properties
will help
achieve the

required effects
in the
environment.

Problem analysis

or the problem

is an approach –

a set of

with aspects of
developing all
kinds of
software, not
just information
